

The best flight crew in the business – you, your consultant and Wizard X4 Productivity Suite.™

Wizard X4 automates the implementation process, documenting everything as it goes. Your experienced Microsoft consulting partner ensures staying on the right path... efficiently getting you to GO LIVE.

Wizard X4 components operate like an Auto Pilot:

- **iConsultant®** – uses an intuitive Q&A approach to configure the system, providing examples and recommendations, and crosschecking configuration logic
- **ConvertMSTR™** – accelerates analysis, mapping and importing of data from any legacy system into Dynamics GP or SL, without knowing SQL or writing Visual Basic scripts
- **Config-TRKR™** – provides an audit trail by automatically documenting initial settings and subsequent changes made to the system control records

Why should you care?

- It's smart – guides you easily from step to step, anticipates, makes recommendations, automatically documents all activity, catches and corrects errors
- It's productive – improves your ability to allocate time and money to your highest value added implementation areas
- It's friendly – step-by-step Q&A approach provides user-friendly screens, examples and recommendations
- It's automatic – guides the user through proper sequences for entering critical setup and configuration information, minimizes manual entry time, enables easy uploading of large data files
- It's a risk reducer – just as the best aircraft and crew help ensure safe flight; Wizard X4 along with your Microsoft partner consultant ensures your safe and secure setup

What do customers say?

“Overall, the support was very good. I feel that both companies [Microsoft Partner and Wizard] took ownership in the project and were always available to answer questions and give support.”

-Assistant Controller, real estate professional services company

“Wizard X4 Productivity Suite saved us hours in implementation costs and reduced the total cost by roughly 30%. Wizard's offerings helped us choose the 'right' system for our needs and enabled us to rapidly realize the benefits of our new Microsoft SL system”

-Accounting Manager, manufacturer

Reduce risk. Land on-time.

Weary of fighting implementation wars?

Wizard X4 leads you to Microsoft Dynamics implementation victories.

Set your sights on the Wizard X4 Command Center and discover how to...

- Stay safe in fixed-price dogfights
- Outflank the competition with ways to leverage Business Ready Licensing (BRL)
- Achieve a win-win (your clients and you) on low price battlefields
- Effectively enlist cost-and-value-conscious clients
- Outmaneuver competitors

Wizard X4 Productivity Suite is a sophisticated set of applications that intuitively automates Dynamics GP and SL setup. It heightens consulting fee value and successful engagements while taking out GO LIVE stress. While it is perfect for even the most seasoned consultant, even a novice can quickly take command of Wizard X4. This is not a tool kit or a click and done wizard.

Wizard X4 provides:

- **Sleek Aerodynamics** – Utilizes Q&A Approach to develop a complete step-by-step process, with user-friendly screens, examples, hints and best practice recommendations.
- **Maximum Payload** – Gives consultants ability to concentrate on higher-value services such as requirements analysis, architecture, design and advanced customization.
- **The Ultimate Flight-tracker** – Crosschecks configuration logic, interfaces with all SQL databases, and documents settings and changes. Automatically captures and remembers every setting, field and change.
- **Automatic Pilot** – Guides the user through a sequential best practice methodology for entering critical setup and configuration information.
- **Heightened Flight Safety** – Optimizes automated setup, conversion and documentation so that consultants can achieve quality-driven implementations that land on-time and on-budget, time after time.
- **Flight Plan Template** – Replicate successful setups, reduce GO-LIVE stress.

Wizard X4 integrated components:

- **iConsultant**[®] – uses an intuitive Q&A Approach to configure Dynamics, providing examples and recommendations while crosschecking configuration logic
- **ConvertMSTR**[™] – accelerates analysis, mapping and importing data from any legacy application into Dynamics GP or SL, without knowing SQL or writing VB scripts
- **Config-TRKR**[™] – provides an audit trail by automatically documenting initial settings and subsequent changes made to the system control records
- **Great customer support** – experienced X4 consultants provide expert design advice and answer implementation questions
